

# Church CMS - User Management Guide

Audience: Administrators who create accounts and assign module access

Last updated: June 2026

PDF: [User-Management-Guide.pdf](./User-Management-Guide.pdf) - regenerate with:

```
```bash
python3 docs/scripts/generate_user_management_pdf.py
```
```

(Requires fpdf2: pip install fpdf2)

## Before you start

- You need an ADMIN account. Do not share your login; each admin should have their own account.
- You must use the main web app (not Django /admin/).
- Have the person's first name, last name, and branch ready before creating them.
- For login-capable users (Member, Pastor, Admin), you will set or auto-generate a temporary password.

## Part 1 - Create a new user

### Step 1: Log in

1. Open the CMS in your browser.
2. Go to the Login page.
3. Enter your admin username and password.
4. Click Sign in.

### Step 2: Open the People page

1. In the left sidebar, click People.
2. Click the Add Person button (top right).

Shortcut: Use the + menu in the top navbar and choose Add Person.

### Step 3: Fill in basic information

On the Basic Info tab, complete at minimum:

| Field                | Required    | Notes                                   |
|----------------------|-------------|-----------------------------------------|
| First name           | Yes         | Used to generate username               |
| Last name            | Yes         | Used to generate username               |
| Email                | Recommended | For contact and password-reset requests |
| Phone, address, etc. | Optional    | As needed for your records              |
| Branch               | Yes         | Required for admins creating users      |

Username rule: The system auto-generates the username from the name (first two letters of first name + last name, lowercase). Example: John Smith -> josmith. If that username exists, a number is appended (josmith1, etc.). Usernames cannot be changed from the main app after creation.

## Step 4: Set role and status

In the Account & Role section:

| Role    | Can log in? | Typical use                                          |
|---------|-------------|------------------------------------------------------|
| Member  | Yes         | Regular church member; add module assignments for co |
| Visitor | No          | Guest record only                                    |
| Pastor  | Yes         | Branch or HQ pastoral oversight                      |
| Admin   | Yes         | Full system access (use sparingly)                   |

Coordinator capabilities come from module assignments (see Part 3 and the Access Levels Guide).

Choose Status (e.g. Active). For visitors, use Invited or Attended.

## Step 5: Set login access (admins only, non-Visitor roles)

If the role is not Visitor, you will see a Login access section:

1. Auto-generate temporary password (recommended, default)
  - The system creates a secure random password.
2. Set password manually
  - Enter and confirm a password (min. 8 characters, at least one letter and one number).

The user will be required to change their password on first login.

## Step 6: Save and share credentials

1. Click Save / submit the form.
2. A User created successfully dialog appears with:
  - Full name
  - Username
  - Temporary password (only when auto-generated)
3. Use Copy buttons and share credentials securely (in person or encrypted channel-not plain email if avoidable).
4. Tell the new user to log in and follow the change password screen.

## Step 7: New user's first login

1. New user opens the login page.
2. Enters the username and temporary password you provided.
3. Is redirected to Change password and must set a new password before using the app.

## Part 2 - Reset a user's password

If someone forgets their password:

### Option A - From the person's profile (recommended)

1. Go to People and open the person's profile.
2. Click Reset password (admin only, not available for Visitors).
3. Choose auto-generate or manual temporary password.
4. Share the new credentials securely.

## Option B - Password reset request workflow

1. User visits Forgot password and is told to contact an administrator.
  2. Admin goes to Admin Settings -> Password Resets tab.
  3. Approve or reject pending requests. Approved resets use a default temporary password (changeme123) unless you use Option A instead.
- 

## Part 3 - Assign module coordinator access

Module assignments grant coordinator, teacher, and bible-sharer access within a module (e.g. Cluster Coordinator, Lessons Teacher). A person is usually a Member (or Pastor) with one or more assignments. A person can hold multiple assignments across modules.

### Step 1: Open Module Coordinators

1. In the sidebar, click Admin Settings (ADMIN only).
2. Open the Module Coordinators tab.

### Step 2: Choose how to assign

#### Single assignment - Create Assignment

1. Click Create Assignment.
2. Select Person (ADMIN users are not listed).
3. Select Module and Level (see reference table below).
4. Choose scope:
  - Module-wide - access across the whole module (typical for Senior Coordinators).
  - Resource-specific - limit to selected clusters, evangelism groups, or Sunday School classes.
5. Click Create Assignment.

#### Multiple resources at once - Bulk assign

1. Click Bulk assign...
2. Pick one person, one module, and one level.
3. For Cluster, Evangelism, or Sunday School with resource-specific scope, multi-select the resources.
4. Submit once; all assignments are saved together.

#### Mixed modules in one submit

1. In the Bulk assign modal, open Advanced.
2. Add rows for different module/level/resource combinations.
3. Submit when all rows are complete.

### Step 3: Verify assignments

- Use the search and Module / Level filters on the Module Coordinators page.
- Open the person's profile -> access section to see their assignments (if visible in UI).

### Module and level reference

| Module  | Available levels                | Resource-specific?      |
|---------|---------------------------------|-------------------------|
| Cluster | Coordinator, Senior Coordinator | Yes - select cluster(s) |
| Finance | Coordinator, Senior Coordinator | Module-wide only        |

|               |                                               |                           |
|---------------|-----------------------------------------------|---------------------------|
| Evangelism    | Coordinator, Senior Coordinator, Bible Sharer | Yes - evangelism group(s) |
| Sunday School | Coordinator, Senior Coordinator, Teacher      | Yes - class(es)           |
| Lessons       | Coordinator, Senior Coordinator, Teacher      | Module-wide only          |
| Events        | Coordinator, Senior Coordinator               | Module-wide only          |
| Ministries    | Coordinator, Senior Coordinator               | Module-wide only          |

### Level meanings (summary)

- Senior Coordinator - Broad module access (branch-scoped unless HQ); usually module-wide.
- Coordinator - Module or resource-scoped leadership (e.g. specific clusters).
- Teacher - Sunday School or Lessons instruction access.
- Bible Sharer - Evangelism group facilitation access.

### Common examples

#### Cluster coordinator for one cluster

1. Create Assignment -> Person -> Module: Cluster -> Level: Coordinator.
2. Scope: Resource-specific -> select the cluster.

#### Lessons teacher (module-wide)

1. Create Assignment -> Person -> Module: Lessons -> Level: Teacher.
2. Scope: Module-wide.

#### Person with multiple hats

1. Use Bulk assign or create several Create Assignment entries.
2. Example: Cluster Coordinator for Cluster A + Sunday School Teacher for Class 1.

## Part 4 - Create another administrator

To onboard a co-admin:

1. People -> Add Person.
2. Set role to Admin.
3. Set branch (HQ branch if they need all-branch visibility).
4. Use Login access to set a temporary password.
5. Share credentials securely; they change password on first login.

Do not share your own admin password.

## Quick reference checklist

### New member who needs to log in

- [ ] People -> Add Person
- [ ] First name, last name, branch, role (Member or higher)
- [ ] Login access -> auto-generate or manual password
- [ ] Copy username/password from success dialog
- [ ] User logs in and changes password

### New module coordinator

- [ ] User exists with login-capable role
- [ ] Admin Settings -> Module Coordinators
- [ ] Create Assignment or Bulk assign
- [ ] Confirm module, level, and scope

### Forgotten password

- [ ] People -> profile -> Reset password  
or Admin Settings -> Password Resets -> Approve request

---

## Troubleshooting

| Issue                              | What to check                                        |
|------------------------------------|------------------------------------------------------|
| Cannot see Admin Settings          | Your account must be role Admin                      |
| No Login access section            | Only Admin sees this when creating non-Visitor users |
| User cannot log in                 | Role must not be Visitor; password must have been se |
| Person not in coordinator dropdown | ADMIN accounts are excluded from assignment picker   |
| Branch required error              | Select a branch before saving                        |
| Weak password rejected             | Min. 8 chars, at least one letter and one number     |

---

## Support

For technical issues (server down, migrations, initial bootstrap admin), contact your system developer or refer to docs/RUNBOOK.md in the project repository.
